

# **Information Security Policy (Confidential)**

## **Access Control**

Access to systems and data follows least privilege and is granted based on role. All access is reviewed quarterly and revoked promptly on role change or departure.

## **Encryption**

Data is encrypted in transit using TLS 1.2 or higher and at rest using AES-256. Encryption keys are rotated at least annually and stored in a managed key vault.

## **Authentication**

Multi-factor authentication is mandatory for all administrative access and all remote access to internal systems.

## **Incident Response**

Security incidents must be reported to the security team within one hour. The incident response plan is tested at least twice per year.
