

Platform Incident Reports (Confidential)

INC-2025-014: API Gateway Latency Spike

On 2025-03-12 the API gateway experienced p99 latency above 1,200 ms for 42 minutes due to a connection pool exhaustion after a dependency upgrade. Mitigation: pool size increased and circuit breaker tuned. Severity: SEV-2.

INC-2025-021: Partial Search Outage

On 2025-04-05 the search service returned errors for 18% of requests for 26 minutes following a bad index migration. Resolved by rolling back the migration. Root cause: missing backward-compatible index alias. Severity: SEV-2.

INC-2025-027: Authentication Service Degradation

On 2025-05-19 token validation latency increased, causing intermittent 401 responses for 12 minutes. Cause: expired cache of signing keys. Action: automated key refresh added. Severity: SEV-3.

Action Items

All SEV-2 incidents require a written postmortem within five business days and at least one preventive action tracked to completion.
