

Department Forecast 2025-2026 (Confidential)

Methodology

Forecasts combine bottom-up departmental plans with a top-down revenue model. A conservative and an optimistic scenario are maintained for planning.

Engineering Forecast

Engineering spend is forecast to grow 12% in 2026 to 12.5 million EUR, driven by 14 planned hires and increased GPU compute for machine learning workloads.

Operations Forecast

Operations spend is expected to remain flat at 3.1 million EUR as efficiency gains offset volume growth.

Risk Factors

Key risks include cloud price increases, currency fluctuation on USD-denominated contracts, and slower revenue growth in the conservative scenario.
